

RxCheck SRS 3.1 build#58 Patch Release

This patch fixes two issues:

1. Logging issue in the inbound-tx.log file where some request messages are not logged
2. The fix for CVE-2022-42889
<https://nvd.nist.gov/vuln/detail/cve-2022-42889>

Patch download location:

http://builds.rxcheck.org/SRS/v3.1/public_final/patches/

Assumptions:

This patch assumes you already have an SRS v3.1 running on your servers.

Steps to apply the patch:

1. Download new ***rxoutbound.war*** and ***rxinbound.war*** files from the patch location.
2. Shutdown current RxCheck SRS v3.1 process.
3. Take a backup of all the files and folders under the ***webapps*** folder of the SRS installation.
4. Delete all files and folders under ***webapps*** folder of the SRS installation.
5. Copy the new ***rxoutbound.war*** file to the ***webapps*** folder.
6. Copy the new ***rxinbound.war*** to the ***webapps*** folder.
7. Start the RxCheck SRS v3.1 process.
