

## RxCheck SRS 3.2b27 Release

**September 13, 2024**

We are pleased to announce the release of RxCheck SRS version 3.2, featuring critical upgrades to enhance performance, security, and platform stability. Critical updates in this release include:

*Apache Tomcat Upgrade:* Updated to version 10 for performance optimizations.

*Spring Framework Update:* Enhanced stability and security through the latest Spring Framework improvements, ensuring a more robust and efficient system.

*JDK 21 Update:* Upgraded to JDK 21, bringing advanced performance capabilities, new language features, and improved security to the RxCheck platform.

These upgrades reflect our continuous commitment to improving system performance while ensuring the highest levels of security for your data. As always, RxCheck remains dedicated to delivering a safe and reliable platform that meets your evolving needs.

### **Release download location:**

[http://builds.rxcheck.org/SRS/v3.2/public\\_final/pdmp/](http://builds.rxcheck.org/SRS/v3.2/public_final/pdmp/)

### **Steps to install the 3.2 version:**

- Please follow the SRS v3.2 install guide.
- If you're already on SRS v3.1 release and upgrading to v3.2, you can use the same certificates and application.yml file from v3.1.

### **IT/Vendor Questions:**

If your IT/vendor personnel would like to discuss this patch release or have technical questions, please have them email Phil Winiarski at IJIS at [phil.winiarski@ijis.org](mailto:phil.winiarski@ijis.org).
